

**This manuscript has undergone a single-blinded peer review. Comments of reviewers are provided here:**

**Reviewer A:**

The language quality of this manuscript is low. There are lots of typo errors.

The manuscript protocol should have been registered in PROSPERO.

While you only have pooled event rates and meta-analysis of proportional analyses does not need a publication bias, you can delete funnel plots.

**Reviewer B:**

Please write complete name of the months in tables.

Detailed number of symptoms in table 1 is not needed. Instead add quality assessment status.

Put supplementary table as a main table of study. But merge that as one table.

PRISMA flowchart should be added.

Add your registration code in text

Please rewrite the discussion; why haven't you cited any article in this part?
